

## practice task #1: sports report

Your friend is writing articles for an online sports site. They want you to create a program which helps generating summaries for team-based sports.

### instructions

Write a program that gets 4 pieces of information from the standard input. Namely, the name and the final score for both teams.

Then, print the following message to the standard output:

Result of the game from last night:

```
<TEAM1> vs. <TEAM2>  
<SCORE1> : <SCORE2>  
<WINNER_TEAM> have won!
```

an example run:

```
Std. Input:  
Name of the first team: Golden State Warriors  
Score of the first team: 112  
Name of the second team: Los Angeles Lakers  
Score of the second team: 100  
Std. Output:  
Result of the game from last night:  
Golden State Warriors vs. Los Angeles Lakers  
112 : 100  
Golden State Warriors have won!
```
